Scope of Services

Medical Oncology and Haematology

- Chemotherapy
- Immunotherapy
- Bone Marrow Transplant
- Paediatric Oncology
- Geriatric Oncology
- · Onco critical Care

Surgical Oncology

- · Head and Neck
- Breast
- · GI, Lung and Thoracic
- Cervical and Gynaecology
- Prostate and Genitourinary
- Colorectal
- · Peritoneal
- · Brain, Spine and Bone
- · Liver and Pancreas

Plastic and Reconstructive Surgeries

Radiation Oncology

· Radiation Therapy

Nuclear Medicine

- \cdot PET CT
- ·SPECT
- High Dose Radionuclide Therapy

Pain and Palliative Care

Radiation Oncology

Dr. Sandeep Jain

Nuclear Medicine

Dr. Sunny Gandhi

Pain Management

Dr. Milan Mehta

Cardiology

Dr. Ketan Vekariya

Medical Oncology and Haematology

Medical Oncology and Haematology

- Dr. Pankaj Shah
- Dr. Manohar Chari
- Dr. Mithun Shah
- Dr. Nahush Tahiliani

Bone Marrow Transplant and Haematology

- Dr. Nidhi Jain
- Dr. Akanksha Garg

Onco-critical Care

Dr. Bikas Mishra

Surgical Oncology

HEAD AND NECK CANCER

- Dr. Mahesh H. Patel
- Dr. Siddharth Shah
- Dr. Dipen Patel
- Dr. Supreet Bhatt

GYNAECOLOGICAL CANCER

- Dr. Ava Desai
- Dr. Mona Shah

G.I., LUNG AND THORACIC CANCER

Dr. Mahesh D. Patel

BREAST CANCER

- Dr. Privanka Chiripal
- Dr. Neelam Ahirwar

UROLOGICAL CANCER

- Dr. Mukesh Patel
- Dr. Raj Patel

NEURO CANCER

- Dr. Dipak Patel
- Dr. Kalpesh Shah

SPINE CANCER

Dr. Hitesh Modi

ORTHOPEDIC CANCER

Dr. Jaymin Shah

PLASTIC AND RECONSTRUCTIVE

SURGERY

- Dr. Raghuvir Solanki
- Dr. Jatin Bhojani

Surgeries offered at Zydus Cancer Centre

- Composite Resection (Commando) surgery for cancers of Buccal Mucosa, Tongue, Floor Mouth and Jaw (without putting any facial cut or lip cut)
- Laser Assisted Surgeries Cordectomies, Partial Laryngectomy and Pharyngectomy
- Endoscopic removal of Nasal / Sinus Cancers (without putting facial cut / incision)
- Minimal Access Surgeries for Thyroid and Parathyroid Tumors
- Removal of Tumors of Parohd Gland, Sub-mandibular Gland, Minor Salivary Glands in Oral cavity
- Neck Dissection for Removal of Cancer Glands and Neck Masses
- Skull Base Surgeries
- Endoscopic Skull Base Surgeries

Department of Head and Neck Cancer

What is Head and Neck Cancer?

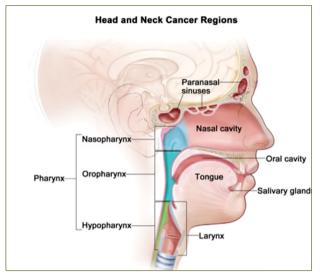

Head and Neck is a group of cancers that starts within the mouth, nose, throat, larynx, sinuses, or salivary glands. About 80% of Head and Neck Cancer is due to the use of alcohol or tobacco. Head and Neck Cancer involves the digestive and respiratory tracts, hence, if left untreated, it can interfere with eating, swallowing, and breathing, and can invade other parts of the body as well. The larger a tumor becomes, the more lifethreatening it is.

What are the symptoms of Head and Neck Cancer?

- Swelling or sore that does not heal
- Red or white patch in the mouth
- Lump, bump, or mass in the head or neck area, with or without pain
- Persistent sore throat
- Foul mouth odour not explained by hygiene
- Hoarseness or change in voice
- Nasal obstruction or persistent nasal congestion
- Frequent nose bleeds and / or unusual nasal discharge
- Difficulty in breathing
- Numbness or weakness of a body part in the head and neck region
- Pain or difficulty in chewing, swallowing, or moving the jaw or tongue
- Blood in the saliva or phlegm
- Loosening of teeth / denture
- Persistent earache
- Unexplained weight loss

Are you at risk for getting Head and Neck Cancer?

If you notice any of the following Head and Neck Cancer symptoms, it is important to notify your physician immediately. Early detection and treatment are paramount and key to your good health. Other risk factors that contribute to Head and Neck Cancer include following:

- Poor oral hygiene
- Ill-fitting dentures
- Chronic iron deficiency
- Alcohol and Tobacco chewing
- Injury due to sharp teeth
- Occupational hazards such as wood dust inhalation and nickel exposure

How often you should be screened for Head and Neck Cancer?

Head and Neck Cancer is often difficult to diagnose early because many people only experience mild symptoms. That is why it is so important to see your physician and dentist regularly, especially if you are a smoker or drinker. Three-quarters of all oral cancers can be seen or felt in a physical examination by your physician and many cancerous lesions are detected by dentists. Cancer of the nasal passageways or middle ear may be more difficult to detect.

What are the treatments for Head and Neck Cancer?

If you are suffering from Head and Neck cancer then in addition to a thorough physical examination, your physician also uses blood tests, imaging techniques such as X-rays, Magnetic Resonance Imaging (MRI), OPG, CT Scan, PET Scan, Endoscopy and Biopsy to make an

accurate diagnosis and develop the most appropriate treatment plan.

Successful treatment for Head and Neck Cancer involves below mentioned treatments. To make an informed choice, ask about the pros and cons of each option, potential side effects, and how effective the treatment is likely to be.

- Surgery
- Radiation Therapy
- Chemotherapy
- Any combination of the above mentioned three treatments

In addition to tumor removal, other goals of successful treatment include restoration of swallowing, eating and speaking functions. Plastic surgery will be needed and speech therapy are sometimes required for cosmetic and functional reasons after surgical removal of Head and Neck Tumors.

HEAD AND NECK ROBOTIC CANCER SURGEON

Dr. Mahesh H. PatelMS, M.Ch
Sr. Head and Neck Onco Surgeon

Dr. Siddharth Shah
MS, Sr. Head and Neck Onco Surgeon
Minimal Invasive and Endoscopic
(Scarless)
